

Tutorial: Paint.NET 3.36 - Resize an Image

When adding **images** to your catalogue it is important to ensure the images are not too large or they will take such a long time to load your customers may loose patience and go to another website.

I would recommend that your images are no larger than 600 pixels in width or height with a resolution of 72 dpi.

To resize an image in Paint.NET

- Open your image
- Click on **Image** (in menu bar) and select **Resize**
- In the menu choose
 - By absolute size
 - Maintain aspect ration
 - Width or Height 600 (whichever is the greater)
 - Resolution 72 pixels per inch
- Click **OK**
- **Save** your image
