

Tutorial: Windows Mail – Create an E-mail Account

Open Windows Mail

Click on the **Tools** menu

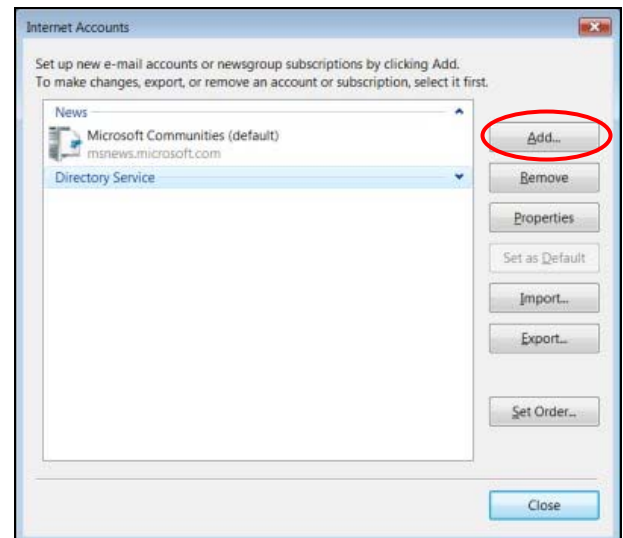

Select **Accounts**

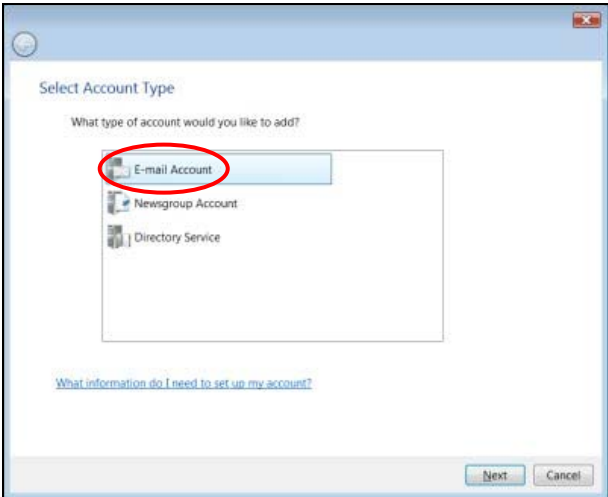

In the **Internet Accounts** menu

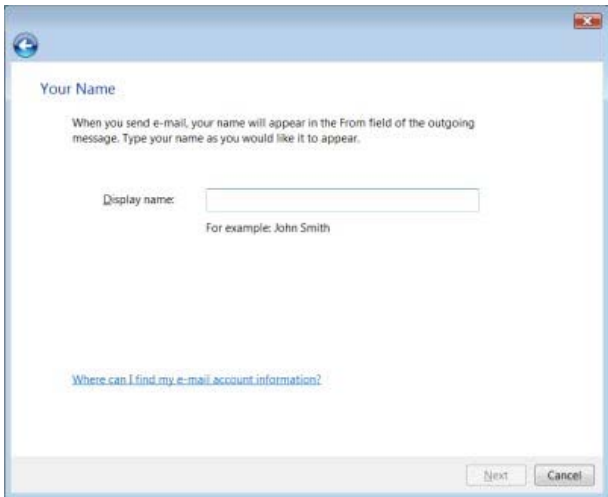

Click **Add**

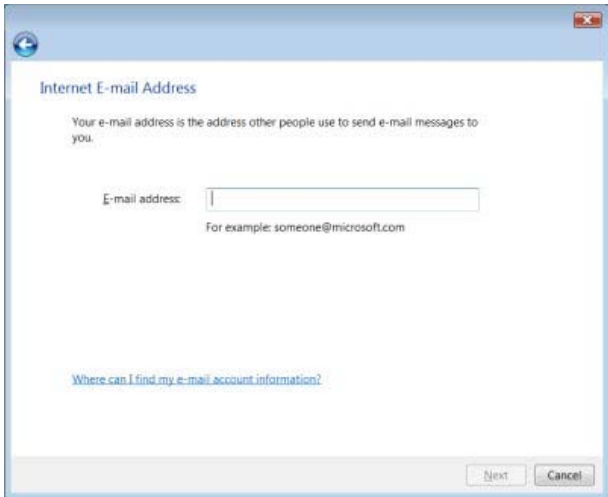

Select E-mail Account

Type in here the name of your company, or if you prefer your personal name, but remember it will be shown on the head of each e-mail you send.

Type your **full e-mail address** in here

Type your **POP3 and SMTP address** here

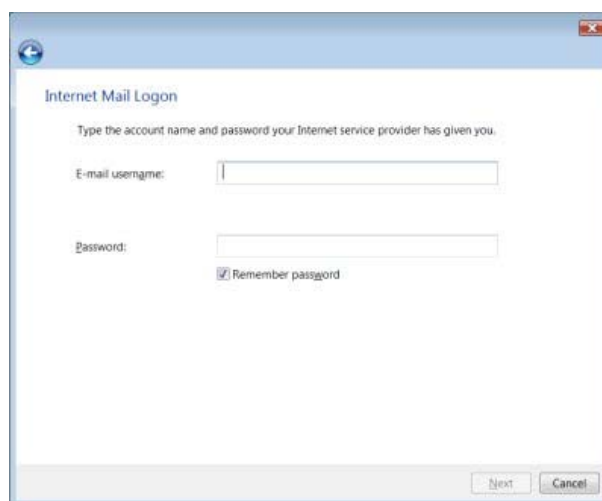

Your e-mail provider can give you these details if you don't know them

Your **Account name** is your full e-mail address

Type it in and your password

If you tick the 'Remember password' box it will save you having to enter it every time you collect your mail

Click **Finish**

You will need to perform the above steps for each e-mail address you want to setup. For example you may have your personal e-mail address, one for the office, and/or accounts for individual members of the company. They will all need setting up.
